Prototypes reviewed with workshop structure and logistical planning finalized via collaborative discussion

MACH X event prototypes and agent architecture

- 4 prototypes are prepared for MACH X featuring LLM-assisted workflows and advanced agents.
- Prototypes 1 and 2 are merged into a single implementation due to close similarities.
- Patrick presented the news monitor researcher as an archetype 2 implementation evaluating RSS feeds.
- Autonomous policy-guided agents operate continuously on schedules within defined guardrails and escalate exceptions.

Infrastructure and model integration

- The prototypes integrate with GitHub and support API keys for Anthropic, OpenAI, and Gemini.
- Vercel provides an AI gateway with \$1000 in credits to cover model costs.
- Community contributions are organized in a separate repository to segregate core working group prototypes.

Workshop format and presentation structure

- The opening session features a structured introduction before transitioning into hands-on building.
- The workshop transitions into informal breakout pods for hands-on building and expert consultation.

Next steps

- ☐ [Patrick Bosek] Complete PR: Complete the pull request process for prototype 2. Submit the configuration from a fork as discussed.
- ☐ [Everett Zufelt] Merge Pull Request: Review and merge the submitted pull request. Fix any security or code issues discovered during the review process.
- ☐ [Patrick Bosek] Add Open Router: Implement Open Router support to allow for additional API model access. Update the project to include this gateway functionality.
- ☐ [Patrick Bosek] Configure AI Gateway: Request access to the team chat and generate an AI gateway key. Integrate the generated key into the project configuration.
- ☐ [The group] Communicate Logistics: Send clear communication to attendees instructing them to join the team before the event. Ensure all participants are prepared for the build lab.
- ☐ [Rebecca Lyus] Review Presentation: Coordinate with marketing to review the presentation slides. Incorporate any feedback or additions suggested by the team.
- ☐ [Rebecca Lyus] Update Slides: Add a placeholder and note for the archetype image in the presentation deck. Insert this between the ebook advertisement and the first archetype section.
- ☐ [Rebecca Lyus] Test Presentation: Test the slide projection and screen functionality prior to the event. Verify the setup on the day of or the morning before the session.
- ☐ [Rebecca Lyus] Arrange Refreshments: Contact the venue to arrange for water in the workshop room. Ensure refreshments are available for participants.
- ☐ [Patrick Bosek] Submit projects: Submit materials for the group to review later today.
- ☐ [Rebecca Lyus] Add attendee: Update participant details to add Patrick Bosek.
- ☐ [Rebecca Lyus] Contact Mark: Communicate with Mark regarding the upcoming conference.

- ☐ [Tim Benniks] Suggest restaurants: Identify local dining locations in Amsterdam suitable for group dinner.
- ☐ [The group] Create repository: Build a dedicated GitHub repository for community projects to ensure segregation from main prototypes.

 [Agent Build Lab - MACH X Amsterdam](#)

Meeting records  [Transcript](#)

Summary

Prototypes reviewed with workshop structure and logistical planning finalized via collaborative discussion

MACH X Prototypes Overview

Prototypes reviewed and merged for workshop demonstration. Pull request permissions resolved for prototype deployment.

Workshop Format and Demos

Workshops structured around architectural examples and informal building. Prototype two demonstrated news monitoring capabilities.

Logistics and Repositories

Community build repositories separated from core working groups. Venue logistics and conference schedules finalized.

Decisions

Aligned

- **Consolidation of prototypes one and two** Prototypes one and two are merged into a single implementation for MACH X Amsterdam due to their close similarity.
- **Presentation of prototypes as optional examples** The group agreed to share the prototypes upfront as architectural examples while allowing attendees to build their own independent projects.
- **Exclusion of video demos from presentations** The participants agreed to omit video demos from the upfront presentation session.
- **Structured presentation format with co-chair moderation** The team established a structured presentation format where co-chairs moderate the session and archetype creators present their respective segments.

Next steps

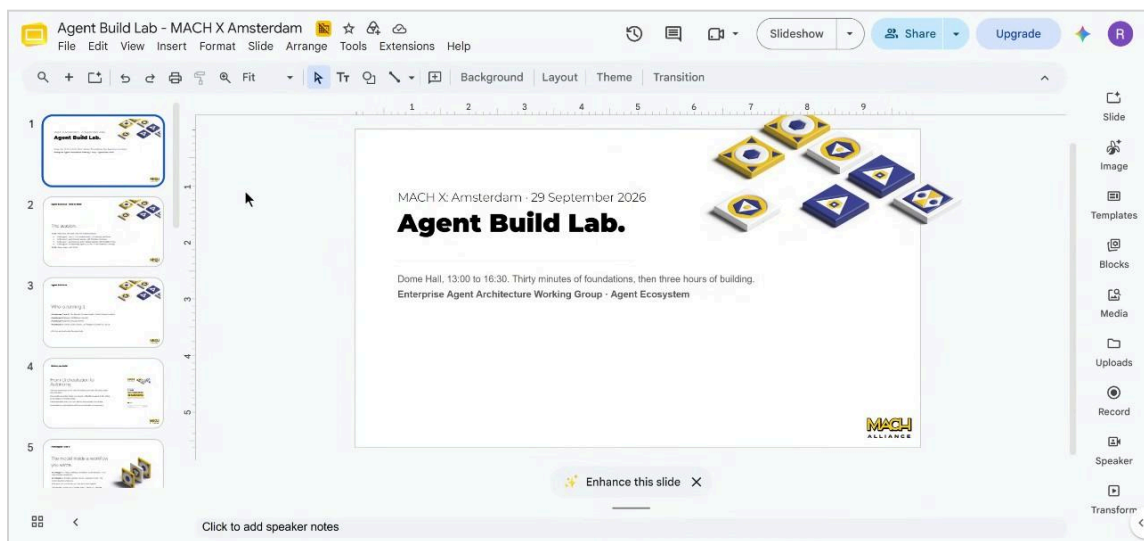

- ☐ [Patrick Bosek] Complete PR: Complete the pull request process for prototype 2. Submit the configuration from a fork as discussed.
- ☐ [Everett Zufelt] Merge Pull Request: Review and merge the submitted pull request. Fix any security or code issues discovered during the review process.
- ☐ [Patrick Bosek] Add Open Router: Implement Open Router support to allow for additional API model access. Update the project to include this gateway functionality.
- ☐ [Patrick Bosek] Configure AI Gateway: Request access to the team chat and generate an AI gateway key. Integrate the generated key into the project configuration.
- ☐ [The group] Communicate Logistics: Send clear communication to attendees instructing them to join the team before the event. Ensure all participants are prepared for the build lab.
- ☐ [Rebecca Lyus] Review Presentation: Coordinate with marketing to review the presentation slides. Incorporate any feedback or additions suggested by the team.
- ☐ [Rebecca Lyus] Update Slides: Add a placeholder and note for the archetype image in the presentation deck. Insert this between the ebook advertisement and the first archetype section.
- ☐ [Rebecca Lyus] Test Presentation: Test the slide projection and screen functionality prior to the event. Verify the setup on the day of or the morning before the session.
- ☐ [Rebecca Lyus] Arrange Refreshments: Contact the venue to arrange for water in the workshop room. Ensure refreshments are available for participants.
- ☐ [Patrick Bosek] Submit projects: Submit materials for the group to review later today.
- ☐ [Rebecca Lyus] Add attendee: Update participant details to add Patrick Bosek.
- ☐ [Rebecca Lyus] Contact Mark: Communicate with Mark regarding the upcoming conference.
- ☐ [Tim Benniks] Suggest restaurants: Identify local dining locations in Amsterdam suitable for group dinner.

- ❑ [The group] Create repository: Build a dedicated GitHub repository for community projects to ensure segregation from main prototypes.

Details

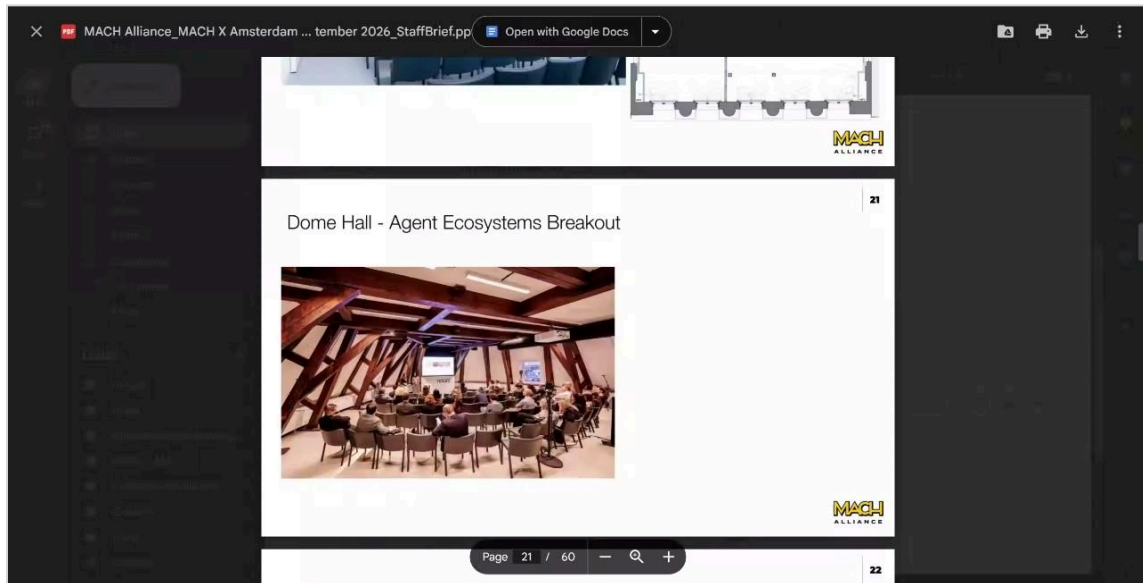

- **MACH X Amsterdam Prototypes Overview:** Rebecca Lyus discussed the four primary prototypes preparing for MACH X Amsterdam, which cover LLM-assisted workflows, goal-directed task-oriented agents, autonomous policy-guided agents, and collaborating self-directed agents. Rebecca Lyus and Patrick Bosek noted that archetypes one and two are being merged due to similarity, with Patrick Bosek and Tim Benniks leading that specific prototype ([00:03:08](#)).
- **Prototype Two Pull Request Unblocking:** Patrick Bosek reported a permissions issue preventing the submission of the pull request for prototype two ([00:03:08](#)). Everett Zufelt instructed Patrick Bosek to submit the pull request from a fork so they could run it through Claude prompts, merge it, and resolve any security or code issues for expediency. Patrick Bosek committed to completing this process immediately after the meeting ([00:04:25](#)).
- **API Token and Vercel Integration for Prototypes:** Patrick Bosek explained that prototype two requires GitHub and an API key supporting Anthropic, OpenAI, or Gemini ([00:05:12](#)). Tim Benniks suggested utilizing OpenRouter or Vercel AI gateway tokens to eliminate user setup hurdles, and George Fitzgibbons confirmed that \$1,000 in AI gateway tokens are available through Vercel ([00:06:14](#)). George Fitzgibbons directed Patrick Bosek to join the team channel to generate an AI gateway key ([00:07:14](#)).
- **Workshop Format and Free Build Structure:** George Fitzgibbons clarified that the provided prototypes serve as architectural examples rather than strict templates, expecting attendees to build their own projects. Everett Zufelt and Tim Benniks agreed that the workshop will feature upfront examples for reference, followed by informal free-building where participants can work independently and consult working group members stationed at specific tables ([00:09:23](#)).

- **Overview of Remaining Prototypes:** Rebecca Lyus reviewed the remaining prototypes, confirming that George Fitzgibbons is leading prototype three (Meridian Terminus, goal-directed task-oriented agents), Daniele Stroppa is leading prototype four (Meridian Pulse, autonomous policy-guided agents), and Everett Zufelt is leading prototype five (Meridian Crossing, collaborating self-directed agents) ([00:11:15](#)).
- **Presentation Slide Structure and Content:** Everett Zufelt outlined the presentation slide deck created via Claude, which includes a title slide, an agenda, upfront technical reference guide promotion, and two slides per prototype ([00:14:42](#)). Tim Benniks and Everett Zufelt discussed adding the five-archetypes architectural image to the slides for marketing purposes and attendee photo opportunities ([00:18:26](#)). Rebecca Lyus updated sharing permissions so Tim Benniks and Patrick Bosek could access and edit the slide deck ([00:22:32](#)).

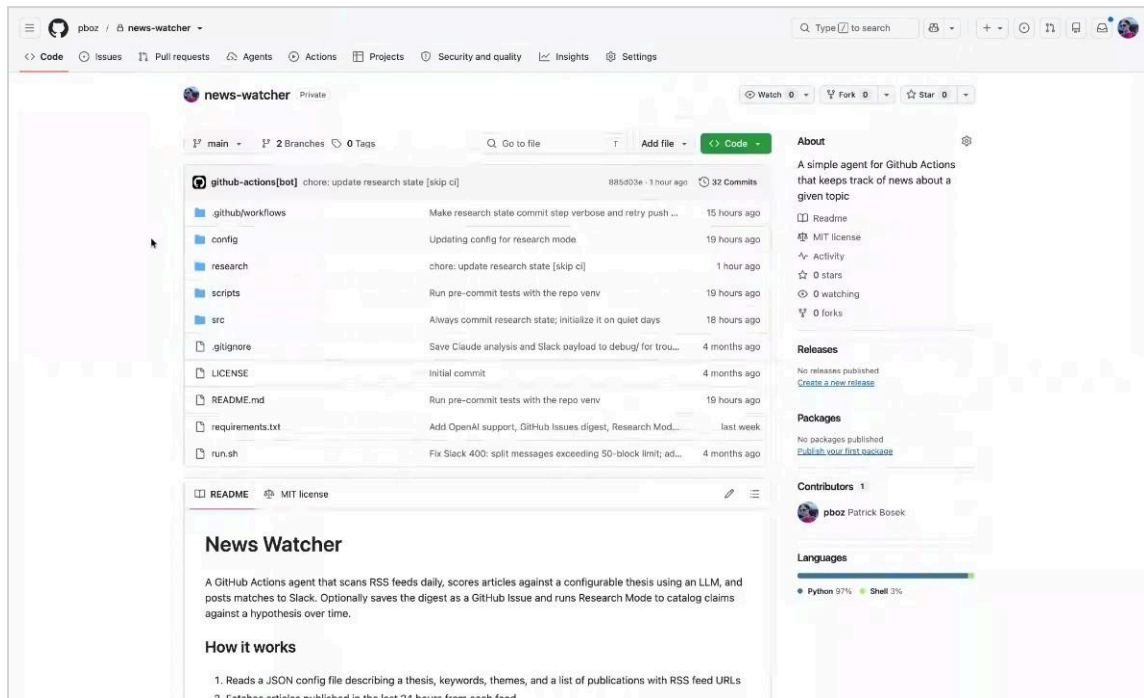

- **Presentation Format and Vibe:** Tim Benniks and Everett Zufelt debated whether the session should feel informal or structured, ultimately deciding on a professional road-show style where Tim Benniks and George Fitzgibbons MC the opening, archetype creators present their specific slides, and the room transitions into open building ([00:24:41](#)) ([00:26:24](#)). The group agreed to exclude video demos from the slide presentation due to time constraints and mixed learning preferences ([00:20:39](#)).

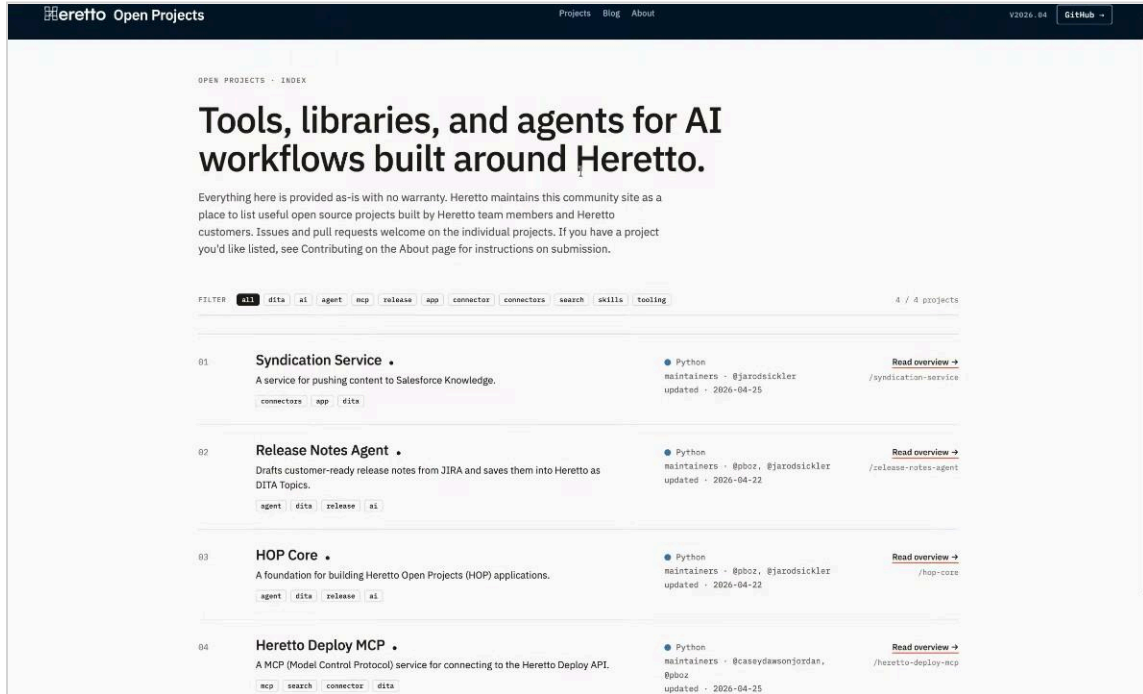

- **Venue Logistics and Refreshments:** Rebecca Lyus noted that catering will be located in the Felix Cafe and promised to request water for the session room ([00:29:22](#)). Rebecca Lyus displayed a staff briefing document showing the room layout at the Canal House in Amsterdam, which includes a back screen and table setups with lift access available ([00:49:53](#)).

- **Prototype Two Demonstration: News Watcher:** Patrick Bosek demonstrated the "News Watcher" (to be titled News Monitor Researcher) prototype running on a personal repository via GitHub actions ([00:30:56](#)) ([00:33:04](#)). Patrick Bosek explained that it monitors a set of RSS feeds, scores articles from 1 to 10 based on a search hypothesis, extracts full articles in research mode, updates hypothesis positions, and commits outputs to GitHub while sending daily updates to a Slack channel ([00:32:05](#)). Patrick Bosek reported that running the system costs less than \$10 over several months and stated that Vercel integration would be added shortly ([00:35:59](#)).

- Distinguishing Archetypes Two and Three:** Tim Benniks and Patrick Bosek discussed the functional differences between archetype two (LLM-assisted workflows) and archetype three (goal-directed task-oriented agents), with Patrick Bosek noting that archetype two merely summarizes data without a target outcome, whereas archetype three introduces explicit goals that trigger higher governance and compliance requirements (00:37:55) (00:39:53). Tim Benniks noted that Claude was used to build archetype two, blurring the developmental boundaries (00:41:01).
- Overview of Archetype Four:** Daniele Stroppa explained that archetype four operates continuously on a schedule using guardrails, policies, and boundaries, executing tasks autonomously and escalating actions outside those boundaries to a human operator (00:41:53).
- Community Build Repositories and GitHub Structure:** Patrick Bosek and Tim Benniks discussed how to handle community-submitted projects after the event, agreeing that community builds should be separated from the core working group repository to avoid maintenance and security burdens (00:44:06). Patrick Bosek and Tim Benniks suggested using a separate community projects repository or a syndication website pattern linking out to external repositories (00:45:13).

- **Conference Schedule and Attendance Coordination:** Rebecca Lyus and Tim Benniks discussed attendance numbers, noting that attendees will be chaperoned from the main lunch into the build lab, which has a 45-minute timeslot ([00:47:42](#)). Rebecca Lyus and Tim Benniks reviewed member day badge pickup logistics, member pre-drinks ending at 7:30 PM on Monday, and attendee arrival schedules for Andrew Martin, Daniele Stroppa, and other participants ([00:48:51](#)) ([00:50:50](#)).

You should review Gemini's notes to make sure they're accurate. [Get tips and learn how Gemini takes notes](#)

Agent Ecosystem Working Group 1: Enterprise Agent Architecture - MACH Alliance - Transcript

00:00:43

Daniele Stroppa: Hey,

Rebecca Lyus: Hello.

Daniele Stroppa: morning.

Rebecca Lyus: How are you doing?

Daniele Stroppa: Very good. How are things?

Rebecca Lyus: Not too bad. We are now in the runup to Mac X.

Daniele Stroppa: Yep.

Rebecca Lyus: Hands on deck. all trickling in now.

Patrick Bosek: Howdy. Howdy everybody.

Rebecca Lyus: Hello. We just give it a couple minutes and we'll get

George Fitzgibbons: Just give it.

Rebecca Lyus: started. right there.

George Fitzgibbons: What's this?

Rebecca Lyus: Is everyone looking forward to MX next week?

Patrick Bosek: Yes. Although I'm not I'm not particularly looking forward to the travel surrounding MACH X if I'm totally honest.

Rebecca Lyus: That's fair. Where are you traveling from?

Patrick Bosek: I'm probably from Rochester, New York, so it's not as it's not like I'm coming from the West Coast or anything. Um, but you know, it's still five days away from family and time zones and a quick turnaround in Amsterdam, that kind of stuff.

Rebecca Lyus: Yeah, it's quite a turnaround. All righty. Um, I'm just going to give Everetta Oh, there he is.

00:03:08

Rebecca Lyus: Beat me to the send button. Right. I feel like this is all of us. Are we happy to get started? Yeah.

Tim Benniks: Let's do it.

Rebecca Lyus: All right. So we have four prototypes that are going out for MACH XAmsterdam uh to do with the LLM assisted and directed workflows, goal directed task orientated agents, autonomous policy guided agents and collaborated collaborating self-directed agents.

Patrick Bosek: Um,

Rebecca Lyus: Uh yes, we need to

Patrick Bosek: I actually have one more that's that's being submitted for archetype 2. I just had a bit of a an issue with the permissions that I'm sorting out.

Rebecca Lyus: Okay, no problem. Um and yes, I believe the one and two are being merged just because they are so close to each other. So, in GitHub, we can see um three, four, and five, and it's just the one and two, which we're only doing one for now, which is with you, Patrick, and Tim. Um,

Everett Zufelt: Is there something I can Yeah.

Rebecca Lyus: did you want

Everett Zufelt: Is there something I can do, Patrick, to unblock you?

00:04:25

Patrick Bosek: Uh, I haven't so I just reconfigured things in between meetings this morning. So, I'm going to try the poll request from a um from a fork. I didn't I didn't realize that was the contribution method. If I messed that up, I'm sorry.

Everett Zufelt: Oh, no.

Tim Benniks: as we could just do a normal PR.

Everett Zufelt: I don't I don't think you've messed Yeah, I don't think you've messed anything up. No,

Tim Benniks: Yeah.

Everett Zufelt: I just if you do it from a fork and then I can run it through the same clawed prompts and whatnot I've run all the other ones through and and get it merged in.

Patrick Bosek: Okay. Okay.

Everett Zufelt: And then for expediency's sake,

Patrick Bosek: Uh yeah.

Everett Zufelt: uh if it's okay with you, if I run across anything like a security issue or a code issue, I'll just I'll just fix those and share it back.

Patrick Bosek: Yeah, no problem.

Rebecca Lyus: Yeah.

Everett Zufelt: Cool.

Patrick Bosek: Um I'm going to I will finish that process as soon as I get off of my meeting after this meeting.

00:05:12

Patrick Bosek: U but I can demo it today. It's very very simple. Um so if you guys want to see what it looks like,

Rebecca Lyus: Yeah.

Patrick Bosek: maybe take five minutes whenever you're ready.

Rebecca Lyus: Uh, did we want to get started now or do we want to talk logistics first?

George Fitzgibbons: Maybe do Sorry for that Patrick, but maybe do quick logistics. I can't say the whole time,

Rebecca Lyus: Yeah. No,

George Fitzgibbons: so

Rebecca Lyus: this is this is fair. So, for your repo real quick, are you happy leading the table for that? Um, Patrick

Patrick Bosek: Oh, yep. Uh, sure. Yeah. Happy to um have a a group of people that I I talked to about this.

Rebecca Lyus: Okay. And what systems does it involve? Do you have tokens sorted? doing. So, thought tokens or anything.

Patrick Bosek: Oh yeah, great question. Um, it involves GitHub and an API key to something. Um, so right now it uses uh Entropic or Open API, maybe also Gemini.

00:06:14

Patrick Bosek: Um, so I can expand it to allow for other other API other like agent API keys,

Rebecca Lyus: Okay.

Patrick Bosek: but right now those are the the three that it accepts.

Rebecca Lyus: Right. Um, so the user who is going to be on the table with you won't need to get token sort anything. They can just use this API key. Do they need to bring anything to sort this?

Patrick Bosek: they need to have an API key to one of the model providers that it supports. Um

Tim Benniks: can we maybe use open router and their free Chinese stuff something

Patrick Bosek: maybe I can certainly try to add that.

Tim Benniks: like or does for sale sponsor a gateway because it's five

George Fitzgibbons: Good.

Patrick Bosek: So it's let me just take a note.

Tim Benniks: bucks you just get it right maybe

George Fitzgibbons: Well, yeah, there's \$1,000 in AI gateway tokens. So,

Tim Benniks: we just do

Rebecca Lyus: Okay.

George Fitzgibbons: uh,

Rebecca Lyus: So,

Patrick Bosek: Okay.

Rebecca Lyus: we can use the cell for this cuz I know Cisco is being used for one of them, right?

00:07:14

Patrick Bosek: Mhm.

Everett Zufelt: Nope.

George Fitzgibbons: so just to close the loop on that,

Everett Zufelt: Sorry. Sorry. I'll just I'll just

George Fitzgibbons: Patrick, you should have uh access uh if you don't, just go to it, this team, and you can just make an AI gateway key and plug it in.

Everett Zufelt: Yeah.

Rebecca Lyus: Okay.

Everett Zufelt: So, let's let's clarify here. My assumption is any of these agents is going to require an LLM.

Patrick Bosek: Mhm.

Everett Zufelt: My other assumption is Rebecca that you Tim and George have sorted out that part of the logistics and yeah

Rebecca Lyus: Yes. with the cell which is the credits.

Everett Zufelt: then I'm good e I'm yeah as long as the it's been sorted then just it needs

Rebecca Lyus: Yeah.

Everett Zufelt: to work with all of the and and George my assumption is that AI gateway is open AI endpoint compatible so anything that knows how to talk to open AI can talk to any of the models on AI gateway.

George Fitzgibbons: Yeah,

Everett Zufelt: Cool. Awesome.

Patrick Bosek: How do I So,

00:08:15

Everett Zufelt: Sounds like that's all sorted.

Patrick Bosek: who do I talk to to get the credits for Versel or the the login key?

George Fitzgibbons: just go to in that chat just try to join that team

Rebecca Lyus: So it should be in the Slack channel.

Patrick Bosek: Okay, got it.

George Fitzgibbons: or this channel or in this chat.

Rebecca Lyus: Yeah.

George Fitzgibbons: Yes, we should tell people and I was talking to Holly last night about this.

Patrick Bosek: Oh, okay.

George Fitzgibbons: We should tell people to join the team ahead of time and Tim made

Rebecca Lyus: Yes.

George Fitzgibbons: that

Rebecca Lyus: Which is why I'm trying to get all of these bits so I can send out some clear communication about it. Um, all right. any of the functionality that's needed for that um prototype. Patrick and a

Patrick Bosek: Also, you have to have a GitHub uh login.

Rebecca Lyus: GitHub.

Patrick Bosek: Yeah.

Rebecca Lyus: Cool.

Patrick Bosek: Yeah.

Rebecca Lyus: Then let's go to prototype three which is Meridian Terminus. So goal directed task orientated orientated agents. That's with you I believe Everett.

00:09:23

Everett Zufelt: I don't think so.

George Fitzgibbons: No,

Rebecca Lyus: No.

George Fitzgibbons: I did that one.

Rebecca Lyus: Oh, was that you George? Sorry.

George Fitzgibbons: Yeah. Uh yeah, that one's all set up. It's ready to go. Uh yeah.

Rebecca Lyus: Okay. And again, is it just GitHub and Vel?

George Fitzgibbons: Yeah, I don't even need GitHub.

Rebecca Lyus: So, just Vel. Um, do they need anything else or pretty much nice and closed?

George Fitzgibbons: It is. I do want to backtrack because I I don't know where this thread's going. Uh the examples are examples, correct? But we expect people to build their own stuff.

Rebecca Lyus: Yes. Yes.

Tim Benniks: That was my assumption also like I wasn't expecting to sit on a table with people to work on example

George Fitzgibbons: Yes.

Rebecca Lyus: Yes.

Tim Benniks: two or something.

Rebecca Lyus: No.

Everett Zufelt: I I I agree.

Rebecca Lyus: No. This.

Everett Zufelt: But I I think I think we're all saying the same thing.

Rebecca Lyus: Yeah.

Everett Zufelt: We're going to share the examples up front as examples talking about the different architecture patterns and then hey who who wants to learn more about these things work on their own thing.

00:10:30

Everett Zufelt: How can we help?

George Fitzgibbons: Okay,

Tim Benniks: Oh,

Rebecca Lyus: Yeah.

Everett Zufelt: We're we're a bunch of people in a room who bunch of people in a room who know how to build agents.

George Fitzgibbons: good.

Tim Benniks: and they can just grab one if they want to. You mean

Rebecca Lyus: Yeah.

Everett Zufelt: And so hey we're all different right? Some people like to learn by doing. Some people are going to like to learn by let me go clone that and poke around and see how it works. So there for the poke around people, we've got some examples they can explore and chat to us about them. And for the I just want to go build something people, we they can do that on their own. They can call one of us over and ask us questions. Like I think that part's going to be quite informal.

Tim Benniks: Okay,

Rebecca Lyus: Yes.

Tim Benniks: perfect. Yeah.

Rebecca Lyus: I do feel some concern which is why we're having people on who are who participate in the working group sitting at specific tables.

00:11:15

George Fitzgibbons: Cool.

Rebecca Lyus: um just so people can come to ask them about these prototypes, but it's pretty much going to be a free build.

Tim Benniks: Okay,

Rebecca Lyus: Fine.

Tim Benniks: it makes total sense now.

Rebecca Lyus: Okay, fantastic. Sorry, I should have started with that.

Tim Benniks: You too, George.

Rebecca Lyus: I just went straight into just went straight to

Tim Benniks: Are you good?

George Fitzgibbons: I'm good.

Tim Benniks: Okay.

George Fitzgibbons: I just wanted to reaffirm that and that makes sense.

Tim Benniks: Yeah. Okay. It is actually the probably the best setup because we do kind of know these examples pretty well.

Rebecca Lyus: Yeah, this is it. So if anyone has any questions or they need to get into the cell or anything like that, then we can easily just point them. Um, uh different tables. So that is table one/2 and three sorted. Then we've got number four which is meridian pulse uh to do with autonomous policy guided agents.

Daniele Stroppa: Uh yeah, that was me. Um same thing.

00:12:22

Daniele Stroppa: Um I'll um I'll I'll go through the setup just making sure that everything works on Versel.

Rebecca Lyus: Yeah.

Daniele Stroppa: Um but uh other than that there wasn't any need for anything else. So all good.

Rebecca Lyus: Okay. Are you happy leading the table? Fantastic. All right. Um and then we've got the final one which is Meridian Crossing which is collaborating self-directed agents.

Everett Zufelt: We're good. I mean, I don't know what the question is. It's been built for a month. It's good to go.

Rebecca Lyus: Yes. But are you okay leading that table?

Everett Zufelt: Yes.

Rebecca Lyus: Yes. Perfect. I figured this is already in place, but this is me just sanity checking so I don't lose the plot this week and just making sure everyone's okay, everyone knows where they're going to be, everyone's happy, right? So that's the second half of it, which I know I've done this backwards. Um, for people being at tables, people being examples, it's just the one with you, Patrick, that needs finalizing, but that's all on track.

00:13:45

Rebecca Lyus: Other than that, I think we're all good for this. Does anyone have any concerns? Any questions? Anything we can get done this week and not on the day.

Tim Benniks: I think we should

Everett Zufelt: I think the biggest out I think the biggest three outstanding items in my head are um one Patrick and and Tim's work. So just as soon as that poll request is submitted, I'll carve out time to review it uh and get it in. And then the second one

being what I think we're going to move to next, which is reviewing the presentation content.

Rebecca Lyus: Yes.

Everett Zufelt: And then just any final dot dot and eyes and crossing tees on logistics. But like I think we're in good shape.

Rebecca Lyus: Perfect.

Tim Benniks: Um, actually, I just wanted to say, hey, we need some slides, but I think that's basically what effort alluded to.

Everett Zufelt: We've we've got we've got we've got some Yeah.

Rebecca Lyus: Yes.

Tim Benniks: How about that? Sorry, I'm so busy.

Rebecca Lyus: All right.

Tim Benniks: I haven't had the chance to see them.

00:14:42

Everett Zufelt: Thank you. Thank you, Claude. Thank you,

Tim Benniks: Oh, yeah,

Everett Zufelt: Claude,

Tim Benniks: exactly.

Everett Zufelt: for creating slides.

Tim Benniks: Nice.

Rebecca Lyus: All right.

Tim Benniks: There you go.

Rebecca Lyus: This is the section I thought we were going to take the longest on is to do with the slides. So, let's move on to that now that this bit has been slaughtered cuz we can just click go All right, Everett, are you happy to leave with the slides?

Everett Zufelt: uh if you want to present them on the screen uh and then I can just share a little bit about them. Like I I put these together pretty straightforward.

Rebecca Lyus: Okay.

Everett Zufelt: There's a title slide, there's an agenda slide which is pretty quick. Uh, and there's a couple of slides just kind of setting up the conversation and promoting the the the technical reference guide. And then each of the prototypes has two slides. Um, they're placeholders right now for for Patrick and Tim for yours. They're whatever quad generated for the other ones.

00:15:38

Everett Zufelt: Sorry, the prototype the the the prototype I did has a uh one extra slide in there for the the Jeff from Cisco to share about their framework. But but basically it's a title slide, an agenda, a little bit of upfront matter, two slides for prototype and have and then a little have a nice Okay.

Rebecca Lyus: I'm now on it. Sorry, I was just trying taking a moment to find it. All right, a build lab with the timings. Just as you said, Everett, uh, we're going to get marketing to look at this and add any bits they want to. um the breakdown with the prototypes, how they're explained, and then the open build. I'm just going to pause here for a second just so people have a chance to have a read through.

Tim Benniks: Yeah. And so do we have slides for the specific archetypes or do we just show that one image?

Everett Zufelt: There are two slides for each archetype,

Rebecca Lyus: Um yeah,

Everett Zufelt: but obviously archetype 2 is placeholder at the moment because there is no archetype 2 yet.

00:16:58

Tim Benniks: Well, Darius luckily soon soon.

Everett Zufelt: Then then you and Patrick can fill in those slides.

Tim Benniks: Exactly.

Rebecca Lyus: then we've got who's running it with each table or each arch type. Um uh yeah, let me just share. Are you happy for me to share ever because I believe these are yours.

Everett Zufelt: Yeah. Fire away.

Tim Benniks: I see mainly Maline's emails in there. I'm not sure outside emails can see this.

Everett Zufelt: I think if you just drop it into the chat,

Rebecca Lyus: Uh let me check.

Everett Zufelt: Rebecca, it'll ask you if you want to share it to everybody on the call.

Tim Benniks: Oh, that's nice. Yeah.

Rebecca Lyus: Uh yes, share with people. um trying to share with people who I'm just doing it with anyone who has access to this link. There we go. Let me know if that doesn't work.

Tim Benniks: Let's try. I'm already in though. That was easy.

Rebecca Lyus: Oh, okay. That makes me feel better. Um, beautiful.

00:18:26

Rebecca Lyus: Would it be easier if people just look on their own screens rather than me presenting because then they can just go through it in their own pace? Yeah.

George Fitzgibbons: Yeah,

Tim Benniks: I wonder if we shouldn't have that lovely image that Everett created be in here somewhere. with like the five archetypes.

Rebecca Lyus: Yes,

Everett Zufelt: Yeah,

Rebecca Lyus: that would be fantastic.

Tim Benniks: Just

Everett Zufelt: we have we have that up front. It it it it references the the reference guide.

Tim Benniks: I don't see it in the slides actually.

Everett Zufelt: Oh, you mean the image,

Tim Benniks: Yeah,

Everett Zufelt: not uh

Tim Benniks: because we could almost just have that image up and we just talk over it. Like we might not even need all the slides.

Everett Zufelt: I think there's a lot of different types of learners out there.

Tim Benniks: That's very true.

Everett Zufelt: Uh I need no slides. I can't see any of them.

Tim Benniks: No, no, you just need to hear us talk.

Everett Zufelt: But I think there's value in having mixed mediums for those who I

00:19:43

Tim Benniks: Yeah.

Everett Zufelt: think I think Rebecca maybe we could toss that image on though if you want to like ask Anelie to do that.

Rebecca Lyus: Yeah.

Everett Zufelt: Um maybe like what maybe Tim between where we advertise the ebook and the first archetype we go into. We could put it on that slowly.

Tim Benniks: Yeah.

Everett Zufelt: Yeah Re if you just want to add a placeholder there and maybe a note. We're actually

Tim Benniks: Because I want people to actually just take a picture on their phone and share it on like Twitter or LinkedIn from that image while we present. Just just have a marketing brain in there somehow. Is that like a that's a real takehome for people?

Daniele Stroppa: and and I was just

Tim Benniks: Sorry. Go on.

Daniele Stroppa: going to say should we also add those um videos that um ever you created. I don't know if you did it for all of them or um just some of them. I know four four and five you did some kind of short demos of the the prototypes that we have built.

00:20:39

Daniele Stroppa: Uh just to give again different people learn in different ways.

Everett Zufelt: Yep.

Daniele Stroppa: Um maybe it's good to see a visual of how the prototype works as well.

Everett Zufelt: I think so. Yeah. And again, I forget if I did I I don't think I put the videos in here, but I think uh I mean question for the group. Maybe this is less about the slides. Do we want to as part of that upfront presentation uh include the video demos where there is one?

Tim Benniks: Well, I don't know. It's We have half an hour, which is pretty long. Like these slides will be done in like 5 minutes.

Rebecca Lyus: Yeah.

Everett Zufelt: I I think I uh I I would think this is going to take 45 over by the time you settle the room and somebody figures out how to show the slides on the screen because inevitably we won't have done that up front and then we go through it honestly and then we're probably going to ask hey if there's 20 people in the room we're probably going to ask them to all give us their name and where they work and a sentence about and by the time we get through the whole thing it's probably 45 minutes I would think.

00:21:50

Everett Zufelt: I I don't think it's five.

Tim Benniks: Okay. Yeah, we can have different I had a completely different angle on how that would work as in everything is set

Rebecca Lyus: They Yes,

Tim Benniks: up. People just go in because they know they're coming here.

Everett Zufelt: Oh,

Tim Benniks: It's all prepped.

Rebecca Lyus: it

Everett Zufelt: I I just I just plan for the worst case scenario.

Tim Benniks: Yeah. Yeah, that makes sense. Okay,

Everett Zufelt: So again,

Tim Benniks: 15 minutes.

Rebecca Lyus: um

Tim Benniks: How about that?

Everett Zufelt: the qu do we want do we want to show videos yet or no?

Tim Benniks: No, I'd say no. But unless they're very entertaining because you're asking people to sit through videos of demos while we just stand there.

Rebecca Lyus: Yeah, I don't like videos.

Tim Benniks: I don't propose we do that.

Everett Zufelt: and getting a lot of not so much on the videos.

Rebecca Lyus: Um,

Everett Zufelt: Are we okay with I couldn't I'm indifferent. Just I'm not getting a lot of strong video signals.

00:22:32

Rebecca Lyus: no.

Everett Zufelt: Okay.

Rebecca Lyus: I'm going to test the slides probably on the Monday to get the screen working or if not at an ungodly hour on the uh Tuesday morning.

Tim Benniks: I tried to add some stuff to the slides, but I don't I think I can only see them not addit.

Patrick Bosek: Yeah, same. I have I only have read access. I think you actually have to properly invite us to create right access.

Rebecca Lyus: Let me just edit the share. I There we go. Uh, refresh. You should be able to edit stuff.

Tim Benniks: No, I'm comment only it seems.

Rebecca Lyus: You just changed it. That's annoying.

Tim Benniks: So what else do we have other than like I guess who presents these slides? That would be a good start.

Everett Zufelt: I think it's I think it's the group of us, right? So, um, whoever wants to open it up, I think maybe Tim and George, that feels like the two of you because you're the ones co-chairing the,

Tim Benniks: Sure.

00:24:41

Everett Zufelt: right? uh open it up,

Tim Benniks: Yeah.

Everett Zufelt: get the intros going, you know, and then just whoever, you know, whoever worked on the on the archetypes, I think are are in the best position to present the one or two slides about each of those kind of feels right.

Tim Benniks: Okay.

Rebecca Lyus: Yep.

Tim Benniks: Yeah, sure. Yeah. Is this something like do we need it like maybe George and I kind of just MC it together because it can feel very awkward very quickly when we have to someone walk up.

Rebecca Lyus: Okay.

Tim Benniks: Oh no, you do your demo. Like I kind of want to feel this like show this is like we work on it together but it has to be kind of road show and somewhat professional. Like am I wrong in having trying to get that vibe or do you guys more feel like oh this just a room with nerds and we kind of just see what happens. What is the vibe from the room here?

Patrick Bosek: I kind of feel like it's the latter.

00:25:35

Tim Benniks: Okay.

Patrick Bosek: I I don't think we should spend a lot of time on the presentation. I think we should give people enough information.

Tim Benniks: Oh, we have half an hour. That's it,

Patrick Bosek: Yeah.

Tim Benniks: right?

Rebecca Lyus: Yeah.

Patrick Bosek: But I'm just saying like I don't think we need to like make put in effort to fill it. I think if we give people enough information to know which table seems most interesting to them, you know, I think fundamentally there's in my view the group is going to kind of break into you know two large buckets. There's going to be people who know what they're doing and they're going to gravitate towards the archetype four and fives maybe three because they want to see something cool and challenging. And there's going to be people who are going to be there who are very new to this stuff and they just want to see an agent do something that is not in a in a chat box and they're probably going to come sit with Tim, you and I like Right.

00:26:24

Tim Benniks: Yeah, exactly.

Patrick Bosek: So like I think everybody gets something regardless as long as they kind of know which of those two like where to go depending on which group you're in.

Tim Benniks: Now, my question was mainly like how professional does it feel when people come in? How organized do we want the Mac Alliance to look in this lab? Is it just, oh, it's a room,

Patrick Bosek: Okay.

Tim Benniks: sit down, go. Or is it like, oh, there's actually somebody who takes care of the presentation and everything is kind of super set and specific. Like, we can land anywhere on that spectrum, but it's kind of good to know between us what that where it sits.

Rebecca Lyus: Yeah, I would prefer it to be on depression. side as the macines person.

Tim Benniks: Oh yeah.

Rebecca Lyus: Um,

Tim Benniks: Yeah, sure. No, but it depends. Like if your audience really doesn't care for that,

Rebecca Lyus: my bias

Everett Zufelt: I mean,

Tim Benniks: then we don't do it,

Everett Zufelt: it feels like we're I'm going to go out on a limb here and say it feels like we

00:27:09

Tim Benniks: right?

Everett Zufelt: are over analyzing this. Perhaps we have some nice branded MACH Allianceslides.

Rebecca Lyus: probably

Everett Zufelt: Tim and George can MCS and kick things off. the people who built a pro an archetype can chat for a couple of minutes about what they built,

Rebecca Lyus: Yeah.

Everett Zufelt: why how they built it, why they why they made those choices, and then we break into whatever, you know, two, three, four little groups and people work on their own in a little pod. They come and ask us questions.

Rebecca Lyus: Yeah.

Everett Zufelt: You know that that

Tim Benniks: And so ever the reason I was asking this is exactly for you to say this and now it's settled right we

Everett Zufelt: Okay,

Rebecca Lyus: Yeah.

Everett Zufelt: I'm just

Tim Benniks: need to at least have discussed it and then we choose a lane and then it's easy because if you don't it feels

Rebecca Lyus: Yes.

Tim Benniks: like ass it's just not fun because having done many of those it can feel super

Rebecca Lyus: No, that's

Tim Benniks: awkward if we don't know this.

00:28:02

Tim Benniks: Sorry to interrupt like that. There you go. Does that make sense?

Rebecca Lyus: Yeah. So, more on the professional side. Tim and George start. People who've made the arch types speak at their bit. Go and build.

Tim Benniks: Yes, it's exactly like ever. Yeah. So, this is perfect. It feels familiar.

Rebecca Lyus: Yeah.

Tim Benniks: familiar enough to be able to just come in and and play. Basically,

Rebecca Lyus: Yeah. And this is something you guys have been working on for months. So, we want it to be a success for the working group. Um, I will be on hand to

make sure everything works techwise, the slides work, everyone's happy. Um, and anything else that may be needed on the day as a last minute panic,

Tim Benniks: No panics.

Rebecca Lyus: no panic.

Tim Benniks: This is going to be awesome.

Rebecca Lyus: Yeah.

Tim Benniks: No, but like also we do know our audience and it's all people like us. So, it's it's going to be pretty good no matter what in that context as long as we give them.

00:29:22

Tim Benniks: Is there like coffees and snacks and stuff or is that another thing that's in the room?

Rebecca Lyus: Uh, I believe it is in a different room.

Tim Benniks: Okay.

Rebecca Lyus: Let me just go have a sneaky look at a document. Um, So, it's probably the um catering is probably going to be in the Felix Cafe, which is the furthest possible place. We could have it.

Tim Benniks: Yeah, I just wonder because people are going to be there for a bit, so it would be kind of nice if they have like some water or something.

Rebecca Lyus: I will get water. I will ask the venue. Right. I've meant that. All right. I feel like we're in a good place. Um, if everyone is happy, did we want to have a look at Patrick's demo?

Tim Benniks: Let's do it.

Rebecca Lyus: Are you on the spot now, Patrick?

Patrick Bosek: All right.

Tim Benniks: This is just like next week.

Patrick Bosek: On the spot.

Tim Benniks: Here we go.

Patrick Bosek: Yeah. Except we're not demoing in front of our room next week.

00:30:56

Patrick Bosek: We're just sitting down with people.

Tim Benniks: Yeah, exactly. It's actually quite nice.

Patrick Bosek: Yeah. Okay. Um I'm going to show this from my private repository because that's where I have it running on a nightly basis. Um obviously we don't want it running on a nightly basis uh in the Mach Alliance repository. Okay. So, this is my news watcher. Uh, in the mock alliance, it will be called um news monitor researcher. I'm probably going to retile it too here. So, it's very simple. This will be a probably less than five minute demo. Um, fundamentally what it does is that you give it a set of RSS feeds that you want to uh keep tabs on and it will watch those feeds and it will then take u the information it gets from those feeds based on you know your the AI that you set up um and a hypothesis that you have. I'll go down to the the flowchart here. Maybe I can Yeah.

00:32:05

Patrick Bosek: So, it'll take the RSS feeds. Uh, it'll score each article um on your search criterion hypothesis from 1 to 10. Um, you have a minimum re relevancy score. If it doesn't meet that score, it just ignores it. If it does, um, it's going to load the research. It's either going to just save if it's in research mode, it's going to load it into like the research process. Um, if it is not in research mode, it's just going to record it and send it to you. Uh in research mode, it will fetch the full article. Um and it's going to read the article and it's going to extract claims from the article that uh are compared to the hypothesis. Um and then it probably it just goes through the process of like updating the the current position of the hypothesis, recording some of the claims, etc., etc., until it commits all of it into GitHub. Um, so I'll show you the output That looks like now.

Tim Benniks: So this is mainly an archetype too right now because you have a few choices.

00:33:04

Patrick Bosek: Yeah.

Tim Benniks: Yeah.

Patrick Bosek: Yep. So I designed this very specifically to be in my view like the minimum viable interesting version of archetype 2. Um I don't know if that's a if that's an acronym yet, but we could make it an acronym.

Tim Benniks: There we go. I think between you and I we agree on this because well we build it though.

Patrick Bosek: Um yeah. Yeah. Minimum interesting. Um, so if you see under the action runs here, I have it scheduled to run daily. Um, so you can see it's run a bunch. Uh, it ran this morning at 9:55. Uh, you can go into the runs if you know GitHub actions are just what they are. It's you kind of no big deal. And then the output is two things in my configuration. Um, one of them is a Slack message. So I get I have a channel in Slack that sends me um updated information on a daily basis. Um the other one is this research file which is the state here.

00:34:05

Patrick Bosek: Um actually let me just show the config real quick first. You can have multiple configs and you can set the config in the settings and GitHub. So I have it pointed to this config. Um so theoretically you could have a bunch of configs and a bunch of different actions that ran on different schedules if you wanted to. So it's kind of cool in that way. Uh, so this config has a name. It has a thesis. My thesis is AI functions better when pulling information from structured content. It has keywords. This is what it uses to to search. So there's a search function that's run against the RSS feed. Here are the RSS feeds I'm pulling from. Um, and then in research mode, you have a hypothesis, which is really just an an expansion of the thesis in this particular case.

Um and then you have a file uh which is where it stores the output of that. Um so there's the there's the hypothesis and then there's the position summary.

00:35:02

Patrick Bosek: So this is the the current position from um all the different claims that it has analyzed. So when it goes through this, it will add claims on a daily basis and then it will reassess all of the claims and update the position. uh which probably over time becomes fairly inefficient, but I think it's still a good demonstration of how this works. Um so I think there's like if you were really going to deploy this into production, you'd probably want to optimize some aspects of that pipeline. But in terms of like just deploying something and seeing it all make decisions about things and then um have kind of a state over time, I think this like articulates it very nicely. Um this is committed into GitHub, so you have a history which is really nice. Um, and yeah, and you can pull this and do whatever you want with it. So that's the whole thing.

Tim Benniks: So for now it's just the one file, right? So this might become several megabytes in like a few months.

Patrick Bosek: Yeah.

00:35:59

Patrick Bosek: Oh yeah, it's So, like I said, there's no doubt that like I'm going to turn off this version of it until I optimize it. Uh because I suspect the claims database here needs to be managed differently, probably with multiple files. I'm not really sure. Like, I don't know. I haven't decided exactly what the architecture I want there is, but like somebody could fork this and they could make, you know, there's all kinds of improvements you can make off this foundation.

Tim Benniks: I think it's super fun to try because it's so simple. It's just a GitHub thing and you run and if you connect it to the AI gateway at for sale, you can spend your well we have a thousand bucks in it so people can kind of try a few things.

Patrick Bosek: Yeah. I mean, so the overall cost of running this against an API key is very low. Like, it's not it's like pennies. Um, so I think I've spent like less than \$10 over several months running this now.

Tim Benniks: Oh, nice.

00:36:58

Patrick Bosek: I haven't been running the research mode for more than a few days. Um, so like that probably increases it. And I haven't gone and checked that yet. I can have some data on that next week. So I'll have a whole week of research mode runs. So I can go and tell people this is roughly what you'd expect, you know, with this quantity of usage. Um, and then obviously you can modify like which model it is that you're configuring against and those kinds of things. Um, and I should have Versel added as a as an option, you know, in the next few hours. So that'll be, you know, very available for people to work with. So I think it's pretty cool. Could

Tim Benniks: So my question is how close this is to archetype three like what's the difference in three from this I would love to learn that

Patrick Bosek: you tell me what three is again off the top of your head? Sorry.

Tim Benniks: that's the problem that's why we have that slide so three is goal directed task

00:37:55

Patrick Bosek: Yeah. Okay. Uh

Tim Benniks: oriented so for us it's LN directed workflows. That's two. And goal directed. So it's it's a little bit more autonomous. Basically, you just say this is the goal run.

Patrick Bosek: yeah. Okay. Uh I don't think it's three at all because it doesn't really have a goal. Um it's not trying to prove a hypothesis. It's just it it is just creating a position based on information. So, it's really just summarizing like you haven't you haven't told it to accomplish anything like you told it to do something. Um,

Tim Benniks: Yeah,

Patrick Bosek: and it has a few different like,

Tim Benniks: exactly.

Patrick Bosek: you know, railways it can switch on and make decisions inside of the thing you're doing, but it's all still very like on the rails.

Tim Benniks: And you could make this a three probably by making all these features that you have MCP tools. So the agent would have to choose which tool to use to get to a certain result of putting this data maybe in a postgres or something.

00:38:55

Tim Benniks: So that is a little bit more thinking. But maybe not even that much because if the tools are well described, it's very similar to this. So who who on the call made number three actually?

Daniele Stroppa: I need it to charge.

Tim Benniks: Oh, he just left. Okay.

Patrick Bosek: Yeah.

Daniele Stroppa: I can

Patrick Bosek: I I still feel like even in that circumstance that would be a more sophisticated level two because

Tim Benniks: Yeah, you're right.

Patrick Bosek: like fundamentally this isn't trying to accomplish anything. It's just running a set of processes and analysis analyses. So it doesn't really care what it comes back with. It's not trying to get to a particular position.

Tim Benniks: And these are the types of discussions we'll hopefully have with the people in the room, right? Let them challenge us on what these archetypes are and how it works and and then you'll see that most people are still within the one to three bucket probably or work at least.

Patrick Bosek: I'd be surprised if we found very many people in the three bucket because if you

00:39:53

Tim Benniks: Oh, you think it's mainly this

Patrick Bosek: think well so so if you think about if you were to have something even that was simple like this that had an actual objective I feel like when you put an objective down that's when you kind of cross the Rubicon into a much higher level of governance um requirements. Um because the thing that we've consistently seen with LMS is that when you move from like just giving them a task and an analysis and some decision- making um to giving them an actual like um target outcome, that's when they start making decisions that are potentially not aligned with exactly what what you want them to do. Um, and so I have not seen in my work, I have not seen a single organization deploy what I would really call an archetype 3. Um, like a true archetype 3. I've seen a lot of stuff that's that's very sophisticated versions of this. Um, but I don't think I've seen anybody go to the point of like here's the outcome that you have to achieve. um you know go and optimize for that that outcome.

00:41:01

Tim Benniks: Unless you use claw to build this thing because cloth is definitely a three in this instance,

Patrick Bosek: Okay. Okay.

Tim Benniks: right?

Patrick Bosek: Fair enough. Yes.

Tim Benniks: But then Yeah.

Patrick Bosek: Outside of that. Yes.

Tim Benniks: Yeah.

Patrick Bosek: Yeah. I did. And yes.

Tim Benniks: So you use three to build a two. How about that?

Patrick Bosek: Yeah, that makes sense.

Tim Benniks: Yeah. So I'd be interested to see like where I work we built something called agent OS and it's basically on top of Mastra and so we're having people build agents that kind of are able to spin up on their own and they can kind of say hey this agent triggers that agent. I have yet to see people actually building a four or a five with that even though they probably could cuz maybe it's just not in our minds yet. But that's what we can find out, you know, in this uh workshop.

Patrick Bosek: Yeah, I have a lot of thoughts on that,

00:41:53

Tim Benniks: That's good.

Patrick Bosek: but Don't know the best part time right now.

Tim Benniks: We need to have we need these. Oh, we need these. That's cool.

Patrick Bosek: Yeah.

Tim Benniks: So Danielle, you made four, right?

Daniele Stroppa: Yeah.

Tim Benniks: So, what did you do for four? That's very different than this.

Daniele Stroppa: Um so four basically you just give it uh it runs on a schedule. It runs continuously and then it has guard rails policies boundaries to operate within and then within that within those boundaries it just keeps on keeps on operating. So if there's kind of wakes up, if there's anything to do, it operates automatic uh autonomously. If not, it goes back and kind of keeps going. And then if there's any action that needs to

be taken outside of those boundaries, then it gets flagged up and it gets escalated to uh to a human.

Tim Benniks: Ah, so that it could be almost a little bit like how people set up Grogbot, right? Where the bots can work together to get some stuff done also.

00:43:01

Daniele Stroppa: Uh yeah, I'm not I'm not familiar with with Crowbot,

Tim Benniks: Oh,

Daniele Stroppa: but uh yeah.

Tim Benniks: that that's basically just open claw but then from XAI.

Daniele Stroppa: Yeah. Yeah. So something similar to those systems.

Tim Benniks: Okay.

Daniele Stroppa: Yeah.

Tim Benniks: Okay, cool. I feel like we if we have this kind of discussion but then with more people I think everybody's going to be pretty happy and then I want to see what people build and we can even have them build it and then others to classify in which archetype it falls and we'll probably see a lot of conversation there.

Daniele Stroppa: I think what would be good is if we also get whatever if we find something interesting that is built uh then we can kind of follow up maybe publish it at one of the prototypes uh or maybe do some more um I don't something something else around it where uh where we we engage even more with the with the community after after this um after the event.

Tim Benniks: Yeah, let's have them make their PRs to us and we can just Yeah,

00:44:06

Daniele Stroppa: Yeah.

Tim Benniks: that's why not. That's the whole point.

Patrick Bosek: We should probably put those in a separate portion of the the repository. So maybe there's like a a community like a MACH Xcommunity folder that

Tim Benniks: Yeah,

Patrick Bosek: has like a 2026 Amsterdam and we can put the projects in there.

Rebecca Lyus: So,

Tim Benniks: makes sense.

Rebecca Lyus: uh, the community is in gradual, so you might be able to start a thread in there.

Tim Benniks: Oh, you mean in the MACH Alliancecommunity website, right?

Patrick Bosek: Oh yeah, yeah,

Rebecca Lyus: Yeah.

Patrick Bosek: yeah. Got it. Okay. Yeah. I was just I just meant in terms of the the structure of the GitHub. the the the prototypes that we're building inside of the working group are are segregated

Rebecca Lyus: Um Yeah.

Patrick Bosek: from community builds that could get, you know, there could be a lot of them very quickly and they're going to have less uh both scrutiny and maintenance.

Tim Benniks: Yeah, that's the thing. And like who will keep those working?

00:45:13

Tim Benniks: Or maybe we just choose this is a nice reference. That's it.

Patrick Bosek: Yeah. I mean,

Tim Benniks: But we

Patrick Bosek: there actually is even an argument for having a separate repository for them because you figure somebody who wants to go and and start working on some of this stuff, they don't want to download a hundred projects.

Tim Benniks: No, this is true.

Rebecca Lyus: No.

Patrick Bosek: So maybe we have a community projects repository where people can submit things. We can set up different,

Rebecca Lyus: Yep.

Patrick Bosek: you know, it's easy to segregate like commit hooks and all that kind of stuff. That would be

Tim Benniks: Yeah. I wonder if because if it's successful and we have a lot of management, I almost feel like they have their own repositories and we just have one repo that says also my

Rebecca Lyus: Heat.

Tim Benniks: client's archetype demos. It's just a link to their stuff.

Patrick Bosek: Oh, you know what? We Yeah, that's that's a really good idea. So,

Tim Benniks: At skill, we're going to die.

00:46:02

Patrick Bosek: this is Yeah.

Tim Benniks: Basically, that's why

Patrick Bosek: So we have a I have a this is a thing that we launched recently for Heredito which is um it's a website that's just a a it's basically a syndication of a bunch of projects and right now it's just Herado employees that have contributed but like we plan on having our customers and community start to submit projects that they're they've built around our tool. So like this pattern might be a really a really good pattern.

Tim Benniks: Yeah,

Patrick Bosek: Um,

Tim Benniks: definitely.

Patrick Bosek: same kind of thing.

Tim Benniks: Yeah, something like this is that's super fun and you see lots of people in our space do it like next which is like

Patrick Bosek: Yeah.

Tim Benniks: a meta framework like next they have like their whole modules structure is built like this.

Patrick Bosek: Mhm.

Tim Benniks: So when you want to install a module for NX, you can either find it on the website or use their CLI and it's just kind of like a routing table like what you just built and then it just installs.

00:46:54

Tim Benniks: But they have like all the security rules running on them as well.

Patrick Bosek: Nice. Yeah. Yeah, that makes sense.

Tim Benniks: Rebecca, I think we're pretty good for next week, especially now that we have the slides,

Rebecca Lyus: the squirrel.

Tim Benniks: we know how we're doing it,

Rebecca Lyus: Yeah.

Tim Benniks: and we just throw it to the people who built the archetype. they can just talk about it a little. That's pretty chill.

Rebecca Lyus: Yeah.

Tim Benniks: And then we will that in that context we will definitely fill that half hour maybe a bit more.

Rebecca Lyus: Yeah.

Tim Benniks: And then after that it's half an hour break and then we get started, right? Was it something like that?

Rebecca Lyus: I think we go straight into it.

Tim Benniks: Oh. Oh, there's no break. Oh, that's good. Okay.

Rebecca Lyus: Yeah.

Tim Benniks: So then it can be 45 without an issue.

Rebecca Lyus: This is it.

Tim Benniks: Oh, nice. Okay. Imagine we get 500 people in there.

00:47:42

Tim Benniks: It's going to be fun. Do you know Rebecca how many should come based on the numbers of the people that are attending the whole conference?

Rebecca Lyus: I don't uh we didn't uh specifically ask people to register for this, which is something that George was querying yesterday with Holly. Um, but because we also have tracks going on at different times, but because this is going to start during the main lunch, I'm going to try and chaperon people.

Tim Benniks: Oh, really? Okay,

Rebecca Lyus: Yeah.

Tim Benniks: that's fine.

Rebecca Lyus: Um, so

Tim Benniks: But we can all shape our own in the morning when we come in and we see the people that we know and then we just say, "Hey,

Rebecca Lyus: Yeah,

Tim Benniks: you have to come to our build lab.

Rebecca Lyus: cuz there's at least half an hour of lunch before the build lab and before anything else starts. So, we have a really nice opportunity to get people

Tim Benniks: Oh, that's cool.

Rebecca Lyus: in.

Tim Benniks: Because over lunch, I'll see a bunch of people that I know.

00:48:51

Tim Benniks: I'll just ask them to join

Rebecca Lyus: I have realized Patrick, you're not on here. So, I will get your details and add you on

Patrick Bosek: Okay,

Rebecca Lyus: and harass Mark.

Patrick Bosek: great.

Daniele Stroppa: What's the um what's the capacity of their own?

Rebecca Lyus: Let me have a look. Sorry,

Patrick Bosek: Um,

Rebecca Lyus: I have far too much.

Patrick Bosek: I have to drop. So, I will see you guys next week.

Rebecca Lyus: Okay.

Patrick Bosek: Very exciting. Um, and I'll have the stuff submitted later today so you guys can review.

Tim Benniks: Thanks, Patrick.

Daniele Stroppa: Thanks,

Rebecca Lyus: All right.

Tim Benniks: Cheers.

Daniele Stroppa: my friend.

Rebecca Lyus: Bye. I don't have details on the capacity, but I have a picture of the room.

Tim Benniks: That that's that's a good start,

Rebecca Lyus: Uh uh this is a secret document that you have never

Tim Benniks: I guess.

Rebecca Lyus: seen and I shall deny all knowledge that you have seen it cuz this is our staff briefing document.

Daniele Stroppa: That's quite What?

00:49:53

Rebecca Lyus: Um yeah.

Tim Benniks: It's really nice. It's not super big,

Daniele Stroppa: Yeah.

Tim Benniks: but that's fine.

Rebecca Lyus: So we're going to have that screen at the back.

Tim Benniks: But yeah,

Rebecca Lyus: Uh and then we're going to have uh I believe there are going to be tables.

Tim Benniks: so this is like a proper canal house then. That's nice.

Rebecca Lyus: Yeah.

Tim Benniks: It's just a big one.

Rebecca Lyus: So,

Tim Benniks: Oh, there you go.

Rebecca Lyus: we we're going to be up here. Um, there is lift access to go up if people need it, if there's an accessibility. Um, let me just check the

Tim Benniks: Oh yeah, we're in Canel House Amsterdam town. So it's going to be lots of stairs.

Rebecca Lyus: There's going to be lots of stairs. Um,

Tim Benniks: But this is the prince of right.

Rebecca Lyus: I don't know.

Tim Benniks: Okay. Because that's the fancy one with the big building. So imagine

Rebecca Lyus: Um but yeah, so everyone's going to be hanging out either at Felix Cafe or the Column Hall um during lunch.

00:50:50

Rebecca Lyus: Then because they're going to have had some drinks, we can then shepherd them up.

Tim Benniks: so what time do you expect us to arrive?

Rebecca Lyus: when it starts. Um,

Tim Benniks: You mean the the when it starts the whole conference or can we come in an hour later? What is your idea about this?

Rebecca Lyus: we would love you to come in first thing in the morning,

Tim Benniks: Okay.

Rebecca Lyus: but understand you work full time and we'd love you there.

Tim Benniks: Can we still pick up our badges in the morning or does it have to be on the day before

Rebecca Lyus: Uh so

Tim Benniks: drinks?

Rebecca Lyus: day before member day uh you can all come to have you had the email about member day or have I before?

Tim Benniks: Yeah, I had Yeah, because I'm work at a member. So, I think that's why maybe Okay.

Rebecca Lyus: Yes.

Tim Benniks: So, it's the idea is that that all members at least show up there to get their badges. So, it's not on the morning of the event.

00:51:44

Rebecca Lyus: Yes. No.

Tim Benniks: Okay. No,

Rebecca Lyus: Uh so it's the day before

Tim Benniks: because I'm planning some things in the afternoon. So, I need to make sure that I'll be there to get my badge.

Rebecca Lyus: Yes.

Tim Benniks: Okay.

Rebecca Lyus: And I don't know when you guys are meeting up whether it's going to be on the Sunday or the Monday after pre-drinks and canopes cuz it finishes at 7:30 the

Tim Benniks: Mhm.

Rebecca Lyus: canopes. So it might be nice if you'll go out afterwards.

Tim Benniks: Yeah. I have to check. I might like because there's also this other event that I'm doing the same week basically.

Rebecca Lyus: Mhm.

Tim Benniks: So, I might have to take my customers for dinner,

Rebecca Lyus: Yeah.

Tim Benniks: which I cannot say no to.

Rebecca Lyus: No, this is fair. Um,

Tim Benniks: But I'll I'll try for sure because my Monday is relatively open.

Rebecca Lyus: yeah. If you have any suggestions for places to go after member day, like cuz you're a local.

00:52:42

Tim Benniks: I haven't lived there for 10 years, but I'm still local enough, I think.

Rebecca Lyus: Yeah. This is so if you have any uh secret places you would suggest for some good local

Tim Benniks: Yeah.

Rebecca Lyus: cuisine.

Tim Benniks: Yeah, but it shouldn't be far away from the canals where we have the party, right?

Rebecca Lyus: No,

Tim Benniks: I guess we don't want to do public transport and all that stuff.

Rebecca Lyus: it's the No. So ideally walking distance and

Tim Benniks: Okay, I can try and think something up, but I'm not sure I can deliver because there's so much turnover in Amsterdam. It's crazy.

Rebecca Lyus: Yeah, that's fair. Um but yeah, excited to see you all next week.

Tim Benniks: Yeah, it's going to be fun.

Rebecca Lyus: It will

Tim Benniks: So, what time are most people landing? Like Danielle, you're the only one with Rebecca in right now in the meeting that is coming right to Amsterdam or Doc Andrew Pun, are you joining?

Andrew Martin: Um, I'll be there. Um,

Tim Benniks: Nice.

Andrew Martin: I'm coming in uh I I'll be there Tuesday early morning um your time and then uh I'm there till Thursday morning um Okay,

Tim Benniks: Okay,

Andrew Martin: cool.

Tim Benniks: cool.

Rebecca Lyus: Okay.

Andrew Martin: Yeah.

Daniele Stroppa: Yeah, I'm I'm landing Monday Monday

Andrew Martin: So we Okay.

Tim Benniks: Yeah. So, So this Monday evening idea that we had actually probably fits the best.

Rebecca Lyus: probably works best.

Tim Benniks: Yeah.

Rebecca Lyus: Okay. Um yeah,

Tim Benniks: All right. Great time box. I say not not bad.

Rebecca Lyus: enough. And no, we've got to see some exciting things.

Andrew Martin: Good night.

Tim Benniks: All right.

Rebecca Lyus: Every feels in good working order.

Tim Benniks: Danielle is just like, "Okay, we're done.

Rebecca Lyus: Okay.

Tim Benniks: Bye-bye." All right.

Rebecca Lyus: Well done. Bye.

Tim Benniks: Um,

Rebecca Lyus: Talk to you all next week.

Tim Benniks: see you next week. Cheers.

Andrew Martin: Thank

Rebecca Lyus: All right.
